

Smooth Move for Centre de santé Saint-Boniface

"I was initially concerned about this move because there were multiple agencies involved, with rigid budget-approval processes. It was imperative that everything was completed on the weekend without any disruption to the services we provide. It went seamlessly. Zantek was fully engaged during every step, which gave me confidence. We were up and running – on time and on budget – with no hassles."

Monique Constant
Executive Director
Centre de santé Saint-Boniface

Centre de santé Snapshot

- Location: Winnipeg, MB
- Services / programs: Promote health; prevent, treat, and manage health problems
- Facilities: 28 examination & consultation rooms on the 2nd floor of the Accès–Access Saint-Boniface building
- Staff: 48

Network project leads to full managed services partnership

Centre de santé Saint-Boniface is a Francophone primary health centre offering bilingual programs and services through an interdisciplinary team of health professionals. A move to larger facilities with double the number of workstations required precision IT planning and project execution. Zantek worked closely with Centre de santé to ensure it was up and running in the new location with zero downtime.

Project objectives

- Configure the new facility network to meet design and budget set by government agencies
- Equip 65 workstations on four floors with tethered internet access
- Enable wireless access throughout the facility
- Disassemble, move and set up new IT infrastructure over a weekend to avoid service disruptions
- Implement a new electronic file backup solution
- Open for business as usual on Monday morning in the new facilities – no hassles!

Why Zantek

- A track record of exceptional service and highly-responsive project managers
- A trusted partner with business and technical expertise
- Reliable, budget-friendly solutions and expert troubleshooting

Benefits

- Planning was seamlessly coordinated with multiple agencies
- The project was completed on time and within budget
- No downtime – users were networked in the new location when they arrived
- Backup solution offers enhanced protection and disaster recovery capabilities

Future phases

- Providing a turn-key solution led to a full managed services partnership
